

Project Initialization and Planning Phase

Date	15 March 2024
Team ID	
Project Name	A Comprehensive Measure of Well-Being
Maximum Marks	3 Marks

Problem Statements :

Governments, researchers, policymakers, and development organizations often face challenges in accurately assessing a country's level of human development. Traditional evaluation methods are time-consuming and require analyzing multiple indicators such as life expectancy, education, and Gross National Income (GNI) per capita. There is a need for an intelligent system that can quickly predict the Human Development Index (HDI) category based on these indicators, enabling faster decision-making and effective policy planning.

Example:

I am	I'm trying to	But	Because	Which makes me feel
Government policymaker	Assess a country's Human Development Index (HDI) accurately	It takes a lot of time to analyze multiple development indicators manually	HDI depends on life expectancy, education, and GNI per capita, making the evaluation complex	Frustrated about delayed policy decisions

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A government policymaker/researcher evaluating a country's development.	Predict the Human Development Index (HDI) category accurately and quickly.	Analyzing multiple indicators manually is time-consuming and prone to errors.	HDI depends on several factors such as life expectancy, education, and GNI per capita.	Confident that an AI-based prediction system can support faster and better decision-making
